

IZAGA W

**The precise dose of
coffee in each cup**

**IZAGA W is the first coffee grinder
with internally scale controlled
doses designed for workflow,
speed and consistency.**

Its innovative Grind-by-Weight
technology with instant scale
controlled dosing guarantees
the maximum consistency and a
constant quality in all your coffees.

IZAGA W

Consistent and precise coffee dosing

The IZAGA W coffee grinder incorporates innovative technology which offers the advantages of real-time scale controlled dosing.

- Consistent and precise dosing
- Less intervention
- Direct programming of desired grams
- Real accounting of coffee consumed in kg
- Empty hopper detection
- Minimal adjustment required

Minimal adjustment required

The innovative Grind-by-Weight technology of the IZAGA W coffee grinder permits consistent coffee doses under different circumstances without barista adjustment.

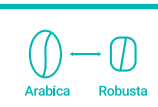

Consistent doses despite changing the grinding point.

The coffee grinding point can be changed to finer or coarser without affecting the coffee dose delivered to the filter.

Consistent doses despite burr wear.

The natural wear of the burrs in the grinding chamber does not affect the ground coffee dose programmed for delivery to the filter.

Consistent doses despite changing the type of coffee.

The ground coffee dose delivered to the filter is not affected by changing the type of coffee (Arabica, Robusta, Liberica or Excelsa) in the hopper.

Constant doses regardless of environmental conditions.

Environmental factors (temperature, humidity or sunlight) do not affect the dose delivered.
